| Status | 2nd byte | 3rd byte |
| :---: | :---: | :---: |
| 8 nH | kkH | vvH |
| 9nH | kkH | 00H |

$\mathrm{n}=$ MIDI channel number: $0 \mathrm{H}-\mathrm{FH}$ (ch.1-ch.16)
$\mathrm{kk}=$ note number: $00 \mathrm{H}-7 \mathrm{FH}(0-127)$
$\mathrm{vv}=$ note off velocity: $00 \mathrm{H}-7 \mathrm{FH}(0-127)$

* The velocity values of Note Off messages are ignored.

## -Note on

| Status | 2nd bytes | $\quad$3rd byte <br> 9 nH |
| :--- | :--- | :--- |

$\mathrm{n}=$ MIDI channel number: $0 \mathrm{H}-\mathrm{FH}$ (ch.1-ch.16)
$\mathrm{kk}=$ note number: $00 \mathrm{H}-7 \mathrm{FH}(0-127)$
$\mathrm{vv}=$ note on velocity: $01 \mathrm{H}-7 \mathrm{FH}(1-127)$

## -Control Change

* The value specified by a Control Change message will not be reset even by a Program Change, etc.

| OBank Select (Controller number 0, 32) |  |  |  |

$\mathrm{n}=$ MIDI channel number: $0 \mathrm{H}-\mathrm{FH}$ (ch.1-ch.16)
$\mathrm{mm}, \mathrm{ll}=$ the value of the parameter specified by RPN
OVolume (Controller number 7)

| Status | $\underline{\text { 2nd bytes }}$ | 3rd byte |
| :--- | :--- | :--- |
| BnH | 07 H | vvH |

$\mathrm{n}=$ MIDI channel number: $0 \mathrm{H}-\mathrm{FH}$ (ch.1-ch.16)
vv = Volume: 00H-7FH (0-127), Initial Value $=64 \mathrm{H}(100)$

* Volume messages are used to adjust the volume balance of each Part.

OPan (Controller number 10)

| Status | 2nd bytes | 3rd byte |
| :--- | :--- | :--- |
| BnH | 0 AH | vvH |

$\mathrm{n}=$ MIDI channel number: 0H-FH (ch.1-ch.16)
vv = pan: 00H-40H-7FH (Left-Center-Right), Initial Value $=40 \mathrm{H}$ (Center)

* For Rhythm Parts, this is a relative adjustment of each Instruments pan setting.'

| OExpression (Controller number 11) |  |  |
| :---: | :---: | :---: |
| Status | 2nd bytes | 3rd byte |
| BnH | 0BH | vvH |

$\mathrm{n}=$ MIDI channel number: $0 \mathrm{H}-\mathrm{FH}$ (ch.1-ch.16)
$\mathrm{vv}=$ Expression: $00 \mathrm{H}-7 \mathrm{FH}(0-127)$, Initial Value $=7 \mathrm{FH}$ (127)

* It can be used independently from Volume messages. Expression messages are used for musical expression within a performance; e.g., expression pedal movements, crescendo and decrescendo

## OHold 1 (Controller number 64)

| Status | $\underline{\text { 2nd bytes }}$ | $\frac{\text { 3rd byte }}{30 \mathrm{H}}$ |

$\mathrm{n}=\mathrm{MIDI}$ channel number: 0H-FH (ch.1-ch.16)
$\mathrm{vv}=$ Control value: $00 \mathrm{H}-7 \mathrm{FH}(0-127)$, Initial Value $=28 \mathrm{H}(40)$

* This message adjusts the Reverb Send Level of each Part.

OEffect 3 (Chorus Send Level) (Controller number 93)

| $\frac{\text { Status }}{\mathrm{BnH}}$ | $\frac{\text { 2nd bytes }}{5 \mathrm{DH}}$ | $\frac{\text { 3rd byte }}{\mathrm{vvH}}$ |
| :--- | :--- | :--- |

$\mathrm{n}=$ MIDI channel number: $0 \mathrm{H}-\mathrm{FH}$ (ch.1-ch.16)
$\mathrm{vv}=$ Control value: $00 \mathrm{H}-7 \mathrm{FH}(0-127)$, Initial Value $=00 \mathrm{H}(0)$

* This message adjusts the Chorus Send Level of each Part.

ORPN MSB/LSB (Controller number 100, 101)

| Status | 2nd bytes | 3rd byte |
| :---: | :---: | :---: |
| BnH | 65 H | mmH |
| BnH | 64 H | 11 H |

$\mathrm{n}=\mathrm{MIDI}$ channel number: 0H-FH (ch.1-ch.16)
$\mathrm{mm}=$ upper byte of parameter number specified by RPN
$\mathrm{ll}=$ lower byte of parameter number specified by RPN

* The value specified by RPN will not be reset even by messages such as Program Change or Reset All Controller.
**RPN**
The RPN (Registered Parameter Number) messages are expanded control changes, and each function of an RPN is described by the MIDI Standard.
To use these messages, you must first use RPN MSB and RPN LSB messages to specify the parameter to be controlled, and then use Data Entry messages to specify the value of the specified parameter. Once an RPN parameter has been specified, all Data Entry messages received on that channel will modify the value of that parameter. To prevent accidents, it is recommended that you set RPN Null (RPN Number $=7 \mathrm{FH} / 7 \mathrm{FH}$ ) when you have finished setting the value of the desired parameter.Refer to Section 4. "Examples of actual MIDI messages" <Example 4> (p. 7).
On the FP-3, RPN can be used to modify the following parameters.

| RPN | Data entry |  |
| :---: | :---: | :---: |
| MSB LSB | MSB LSB | Explanation |
| 00 H 00 H | mmH --- | Pitch Bend Sensitivity mm : 00H-18H ( $0-24$ semitones), Initial Value $=02 \mathrm{H}$ ( 2 semitones) <br> 11: ignored (processed as 00h) specify up to 2 octaves in semitone steps |

Supplementary material, "About tuning" (p. 8) |
| 00H 02H | mmH --- | Master Coarse Tuning mm : $28 \mathrm{H}-40 \mathrm{H}-58 \mathrm{H}(-24-0-+24$ semitones), Initial Value $=40 \mathrm{H}$ ( 0 cent) <br> 11: ignored (processed as 00h) |
| 7FH 7FH | --- --- | RPN null <br> Set condition where an RPN is unspecified. The data entry messages after set RPN null will be ignored. (No Data entry messages are required after RPN null). <br> Settings already made will not change. <br> mm , Il: ignored |

## -Program Change

| Status | 2nd bytes <br> CnH |
| :--- | :--- |

$\mathrm{n}=$ MIDI channel number: $0 \mathrm{H}-\mathrm{FH}$ (ch.1-ch.16)
pp $=$ Program number: $00 \mathrm{H}-25 \mathrm{H}, 3 \mathrm{FH}$ (prog.1-prog.38, prog.64)

* After a Program Change message is received, the sound will change beginning with the next Note-on. Voices already sounding when the Program Change message was received will not be affected.

$\mathrm{n}=$ MIDI channel number: $0 \mathrm{H}-\mathrm{FH}$ (ch.1-ch.16)
$\mathrm{mm}, \mathrm{ll}=$ Pitch Bend value: 00 00H - 40 00H - 7F 7FH ( $-8192-0-+8191$ )

## ■Channel Mode Messages

-All Sounds Off (Controller number 120)

| $\frac{\text { Status }}{\mathrm{BnH}}$ | $\underline{\text { 2nd byte }}$ |  |
| :--- | :--- | :--- |
|  | 78 H | 3rd bytes |

$\mathrm{n}=$ MIDI channel number: $0 \mathrm{H}-\mathrm{FH}$ (ch.1-ch.16)

* When this message is received, all currently-sounding notes on the corresponding channel will be turned off immediately
-Reset All Controllers (Controller number 121)

| $\frac{\text { Status }}{\mathrm{BnH}}$ | $\frac{\text { 2nd byte }}{79 \mathrm{H}}$ | $\frac{\text { 3rd bytes }}{}$ |
| :--- | :--- | :--- |
|  | 00 H |  |

$\mathrm{n}=\mathrm{MIDI}$ channel number: 0H-FH (ch.1-ch.16)

* When this message is received, the following controllers will be set to their reset values.

| Controller | $\underline{\text { Reset value }}$ |
| :--- | :--- |
| Pitch Bend Change | +-0 (Center) |
| Expression | 127 (max) |
| Hold 1 | 0 (off) |
| Sostenuto | 0 (off) |
| Soft | 0 (off) |
| RPN | unset; previously set data will not change |

-All Notes Off (Controller number 123)

| Status | 2nd byte | 3 rd byte |
| :---: | :---: | :---: |
| BnH | 7BH | 00 H |

$\mathrm{n}=$ MIDI channel number: $0 \mathrm{H}-\mathrm{FH}$ (ch.1-ch.16)

* When All Notes Off is received, all notes on the corresponding channel will be turned off. However if Hold 1 or Sostenuto is ON, the sound will be continued until these are turned off.
-OMNI OFF (Controller number 124)

| $\frac{\text { Status }}{\mathrm{BnH}}$ | $\frac{\text { 2nd byte }}{7 \mathrm{CH}}$ | $\frac{\text { 3rd bytes }}{00 \mathrm{H}}$ |
| :--- | :--- | :--- |

$\mathrm{n}=$ MIDI channel number: $0 \mathrm{H}-\mathrm{FH}$ (ch.1-ch.16)

* The same processing will be carried out as when All Notes Off is received

## -OMNI ON (Controller number 125)

| Status | $\underline{\text { 2nd byte }}$ | 3rd bytes <br> BnH |
| :--- | :--- | :--- |
|  | 7 DH | 00 H |

$\mathrm{n}=$ MIDI channel number: $0 \mathrm{H}-\mathrm{FH}$ (ch.1-ch.16)

* OMNI ON is only recognized as "All notes off;" the Mode doesn't change (OMNI OFF remains).

## OMONO (Controller number 126)

| Status | $\frac{\text { 2nd byte }}{\mathrm{BnH}} \quad$ |  |
| :--- | :--- | :--- |
| 7 EH | 3rd bytes |  |
| mmH |  |  |

$\mathrm{n}=\mathrm{MIDI}$ channel number: 0H-FH (ch.1-ch.16)
$\mathrm{mm}=$ mono number: $00 \mathrm{H}-10 \mathrm{H}(0-16)$

* The same processing will be carried out as when All Sounds Off and All Notes Off is received, and the corresponding channel will be set to Mode $4(M=1)$ regardless of the value of "mono number."

## -POLY (Controller number 127)

| Status | 2nd byte | 3rd bytes |
| :---: | :---: | :---: |
| BnH | 7FH | 00H |

$\mathrm{n}=$ MIDI channel number: 0H-FH (ch.1-ch.16)

* The same processing will be carried out as when All Sounds Off and All Notes Off is received, and the corresponding channel will be set to Mode 3.

## ©System Realtime Message

## -Active Sensing

Status
FEH

* When Active Sensing is received, the unit will begin monitoring the intervals of all further messages. While monitoring, if the interval between messages exceeds 420 ms , the same processing will be carried out as when All Sounds Off, All Notes Off and Reset All Controllers are received, and message interval monitoring will be halted.

## ■System Exclusive Message

F0H: System Exclusive Message status
ii $=$ ID number: an ID number (manufacturer ID) to indicate the manufacturer whose Exclusive message this is. Rolands manufacturer ID is 41 H . ID numbers 7EH and 7FH are extensions of the MIDI standard; Universal Non-realtime Messages (7EH) and Universal Realtime Messages (7FH).
dd,...,ee = data: 00H-7FH (0-127)
F7H: EOX (End Of Exclusive)

The System Exclusive Messages received by the FP-3 are Universal Realtime System Exclusive messages and Data Set (DT1).

## -Data transmission

FP-3 can receive the various parameters using System Exclusive messages. The exclusive message of data has a model ID of 42 H and a device ID of 10 H (17).

## OData set 1 (DT1)

This is the message that actually performs data transmission, and is used when you wish to ransmit the data

| F7H | EOX (End Of Exclusive) |

* The amount of data that can be transmitted at one time depends on the type of data, and data can be received only from the specified starting address and size. Refer to the Address and Size given in Section 3 (p. 5).
* Data larger than 128 bytes must be divided into packets of 128 bytes or less. If "Data Set $1^{\prime \prime}$ is transmitted successively, there must be an interval of at least 40 ms between packets.
Regarding the checksum please refer to section 4 (p. 7).

## Section 2. Transmit data

* The following messages are transmitted on MIDI channel 10 (ch. 10) when a Drum Set tone is selected on the panel.
* In Split mode, only the note messages of the performance data from the left-hand side are transmitted on MIDI channel 3 (ch. 3)

If you set Sympathetic Resonance (MSB: 00h; LSB: 40h) to EFX type, 40h to EFX Control Source, and 7Fh to EFX Control Depth, you can control the amount of Sympathetic Resonance by means of Damper messages.

## -Part Parameters

FP-3 has 16 parts. Parameters that can be set individually for each Part are called Part parameters.
If you use exclusive messages to set Part parameters, specify the address by Block number rather than Part Number (normally the same number as the MIDI channel). The Block number can be specified as one of 16 blocks, from $0(\mathrm{H})$ to $\mathrm{F}(\mathrm{H})$.
The relation between Part number and Block number is as follows.

| x...BLOCK NUMBER (0-F), | Part 1 (MIDI ch = 1) $\mathrm{x}=1(\mathrm{H})$ |
| :---: | :---: |
|  | Part $2($ MIDI ch $=2$ ) $\mathrm{x}=2(\mathrm{H})$ |

* ASSIGN MODE is the parameter that determines how voice assignment will be handled when sounds overlap on identical note numbers in the same channel (i.e., repeatedly struck notes). This is initialized to a mode suitable for each Part, so for general purposes there is no need to change this.

|  |  |  |  | $2=$ MAP2 |  |  |

* This parameter sets the Drum Map of the Part used as the Drum Part. FP-3 can simultaneously (in different Parts) use up to two Drum Maps (MAP1, MAP2). With the initial settings, Part10 (MIDI CH $=10, x=0$ ) is set to MAP1 ( 1 ), and other Parts are set to normal instrumental Parts (OFF (0)).

## oDecimal and Hexadecimal table

In MIDI documentation, data values and addresses/sizes of exclusive messages etc. are expressed as hexadecimal values for each 7 bits.
The following table shows how these correspond to decimal numbers.

| Dec. | Hex. | Dec. | Hex. | Dec. | Hex. | Dec. | Hex. |
| ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |

* Decimal values such as MIDI channel, bank select, and program change are listed as one (1) greater than the values given in the above table.

A 7-bit byte can express data in the range of 128 steps. For data where greater precision is required, we must use two or more bytes. For example, two hexadecimal numbers aa bbH expressing two 7 -bit bytes would indicate a value of aa $\times 128+\mathrm{bb}$.

* In the case of values which have $\mathrm{a} \pm$ sign, $00 \mathrm{H}=-64,40 \mathrm{H}= \pm 0$, and $7 \mathrm{FH}=+63$, so that the decimal expression would be 64 less than the value given in the above chart. In the case of two types, $0000 \mathrm{H}=-8192,4000 \mathrm{H}= \pm 0$, and $7 \mathrm{~F} 7 \mathrm{FH}=+8191$. For example if aa bbH were expressed as decimal, this would be aa $\mathrm{bbH}-4000 \mathrm{H}=\mathrm{aa} \times 128+\mathrm{bb}-64 \times 128$.
* Data marked "nibbled" is expressed in hexadecimal in 4-bit units. A value expressed as a 2-byte nibble 0 a 0 bH has the value of $\mathrm{a} \times 16+\mathrm{b}$.

## <Example1> What is the decimal expression of 5AH?

From the preceding table, $5 \mathrm{AH}=90$

## <Example2> What is the decimal expression of the value $12 \mathbf{3 4 H}$ given as

 hexadecimal for each 7 bits?From the preceding table, since $12 \mathrm{H}=18$ and $34 \mathrm{H}=52$
$18 \times 128+52=2356$
<Example3> What is the decimal expression of the nibbled value 0A 0309 0D?
From the preceding table, since $0 \mathrm{AH}=10,03 \mathrm{H}=3,09 \mathrm{H}=9,0 \mathrm{DH}=13$
$((10 \times 16+3) \times 16+9) \times 16+13=41885$

## <Example4> What is the nibbled expression of the decimal value $1258 ?$

16) 1258
17) $78 \quad . .10$
18) $4 \quad \ldots 14$

Since from the preceding table, $0=00 \mathrm{H}, 4=04 \mathrm{H}, 14=0 \mathrm{EH}, 10=0 \mathrm{AH}$, the answer is 00040 E OAH.

## -Examples of actual MIDI messages

## <Example1> 92 3E 5F

9 n is the Note-on status, and n is the MIDI channel number. Since $2 \mathrm{H}=2,3 \mathrm{EH}=62$, and $5 \mathrm{FH}=95$, this is a Note-on message with MIDI $\mathrm{CH}=3$, note number 62 (note name is D 4 ), and velocity 95 .

## <Example2> CE 24

CnH is the Program Change status, and n is the MIDI channel number. Since EH $=14$ and $24 \mathrm{H}=36$, this is a Program Change message with MIDI CH $=15$, program number 37 (Flute in FP-3).

## <Example3> EA 0028

EnH is the Pitch Bend Change status, and n is the MIDI channel number. The 2nd byte $(00 \mathrm{H}$ $=0)$ is the LSB and the 3rd byte $(28 \mathrm{H}=40)$ is the MSB, but Pitch Bend Value is a signed number in which $4000 \mathrm{H}(=64 \times 128+0=8192)$ is 0 , so this Pitch Bend Value is $2800 \mathrm{H}-4000 \mathrm{H}=40 \times 128+0-(64 \times 128+0)=5120-8192=-3072$ If the Pitch Bend Sensitivity is set to 2 semitones, $-8192(0000 \mathrm{H})$ will cause the pitch to change -200 cents, so in this case $-200 \times(-3072) /(-8192)=-75$ cents of Pitch Bend is being applied to MIDI channel 11.

## <Example4> B3 6400650006 0C 260064 7F 65 7F

BnH is the Control Change status, and n is the MIDI channel number. For Control Changes, the 2 nd byte is the control number, and the 3rd byte is the value. In a case in which two or more messages consecutive messages have the same status, MIDI has a provision called "running status" which allows the status byte of the second and following messages to b e omitted. Thus, the above messages have the following meaning.

B3 $6400 \quad$ MIDI ch.4, lower byte of RPN parameter number: 00 H
(B3) $6500 \quad$ (MIDI ch.4) upper byte of RPN parameter number: 00 H
(B3) 060 C (MIDI ch.4) upper byte of parameter value: 0 CH
(B3) 2600 (MIDI ch.4) lower byte of parameter value: 00 H
(B3) $647 \mathrm{~F} \quad$ (MIDI ch.4) lower byte of RPN parameter number: 7FH
(B3) $657 \mathrm{~F} \quad$ (MIDI ch.4) upper byte of RPN parameter number: 7FH

In other words, the above messages specify a value of 0 C 00 H for RPN parameter number 0000 H on MIDI channel 4, and then set the RPN parameter number to 7F 7FH.

RPN parameter number 0000 H is Pitch Bend Sensitivity, and the MSB of the value indicates semitone units, so a value of $0 \mathrm{CH}=12$ sets the maximum pitch bend range to $\pm 12$ semitones (1 octave).

Once the parameter number has been specified for the RPN, all Data Entry messages transmitted on that same channel will be valid, so after the desired value has been transmitted, it is a good idea to set the parameter number to 7F 7FH to prevent accidents. This is the reason for the (B3) 647 F (B3) 657 F at the end.

It is not desirable for performance data (such as Standard MIDI File data) to contain many events with running status as given in <Example $4>$. This is because if playback is halted during the song and then rewound or fast-forwarded, the sequencer may not be able to transmit the correct status, and the sound source will then misinterpret the data. Take care to give each event its own status.

It is also necessary that the RPN parameter number setting and the value setting be done in the proper order. On some sequencers, events occurring in the same (or consecutive) clock may be transmitted in an order different than the order in which they were received. For this reason it is a good idea to slightly skew the time of each event (about 1 tick for TPQN = 96 , and about 5 ticks for TPQN $=480$ ).

* TPQN: Ticks Per Quarter Note

## -Example of an Exclusive message and calculating a Checksum

Roland Exclusive messages are transmitted with a checksum at the end (before F7) to make sure that the message was correctly received. The value of the checksum is determined by the address and data (or size) of the transmitted exclusive message.

## OHow to calculate the checksum (hexadecimal numbers are indicated by

 'H')The checksum is a value derived by adding the address, size and checksum itself and inverting the lower 7 bits.
Heres an example of how the check sum is calculated. We will assume that in the exclusive message we are transmitting, the address is aa bb ccH and the data or size is dd ee ffH.
$a a+b b+c c+d d+e e+f f=s u m$
sum / 128 = quotient.. remainder
128 - remainder $=$ checksum

## <Example> Setting REVERB MACRO to type 3

According to the "Parameter Address Map," the REVERB MACRO Address is 4001 30H, and value is 03 H . Thus,
$\frac{\mathrm{F} 0}{(1)} \quad \frac{41}{(2)} \quad \frac{10}{(3)} \quad \frac{42}{(4)} \quad \frac{12}{(5)} \quad \underline{400130} \quad \frac{03}{\text { Address }} \quad \underline{? ?} \quad \frac{?}{\text { data }} \quad \frac{\mathrm{F} 7}{(6)}$
(1) Exclusive Status, (2) ID (Roland), (3) Device ID (17),
(4) Model ID, (5) Command ID (DT1), (6) End of Exclusive

Next we calculate the checksum
$40 \mathrm{H}+01 \mathrm{H}+30 \mathrm{H}+03 \mathrm{H}=64+1+48+3=116$ (sum)
116 (sum) / $128=0$ (quotient) ... 116 (remainder)
checksum $=128-116($ remainder $)=12=0 \mathrm{CH}$
This means that F0 4110421240013003 0C F7 is the message we transmit.

## -About tuning

In MIDI, individual Parts are tuned by sending RPN \#1 (Master Fine Tuning) to the appropriate MIDI channel.
In MIDI, an entire device is tuned by either sending RPN \#1 to all MIDI channels being used, or by sending a System Exclusive MASTER TUNE (address 400000 H ).
RPN \#1 allows tuning to be specified in steps of approximately 0.012 cents (to be precise, 100/8192 cent), and System Exclusive MASTER TUNE allows tuning in steps of 0.1 cent. One cent is $1 / 100$ th of a semitone.
The values of RPN \#1 (Master Fine Tuning) and System Exclusive MASTER TUNE are added together to determine the actual pitch sounded by each Part.
Frequently used tuning values are given in the following table for your reference. Values are in hexadecimal (decimal in parentheses).

| Hz in A4 | cent | RPN \#1 | Sys.Ex. 40 00 00 |
| :--- | ---: | :--- | :--- |
| 445.0 | +19.56 | $4 \mathrm{C} 43(+1603)$ | $00040 \mathrm{C} 04(+196)$ |

## -The Scale Tune Feature (address: 40 1x 40)

The scale Tune feature allows you to finely adjust the individual pitch of the notes from C through B. Though the settings are made while working with one octave, the fine adjustments will affect all octaves. By making the appropriate Scale Tune settings, you can obtain a complete variety of tuning methods other than equal temperament. As examples, three possible types of scale setting are explained below.

## OEqual Temperament

This method of tuning divides the octave into 12 equal parts. It is currently the most widely used form of tuning,
especially in occidental music. On FP-3, the default settings for the Scale Tune feature produce equal temperament.

## OJust Temperament (Keytone C)

The three main chords resound much more beautifully than with equal temperament, but this benefit can only be obtained in one key. If transposed, the chords tend to become ambiguous. The example given involves settings for a key in which $C$ is the keytone.

## OArabian Scale

By altering the setting for Scale Tune, you can obtain a variety of other tunings suited for ethnic music. For example, the settings introduced below will set the unit to use the Arabian Scale.

Example Settings

| Note name | Equal Temperament |  | Iust Temperament (Keytone C) |  |
| :--- | :---: | :---: | :---: | :---: |
| Arabian Scale |  |  |  |  |
| C | 0 | +14 | -6 |  |
| C\# | 0 | -14 | +45 |  |
| D | 0 | +18 | -2 |  |
| D\# | 0 | +30 | -12 |  |
| D | 0 | +2 | -51 |  |
| E | 0 | +12 | -8 |  |
| F | 0 | -16 | +43 |  |
| F\# | 0 | +16 | -4 |  |
| G | 0 | -12 | +47 |  |
| G\# | 0 | 0 | 0 |  |
| A | 0 | +32 | -10 |  |
| A\# | 0 | +4 | -49 |  |

The values in the table are given in cents. Refer to the explanation of Scale Tuning on p. 6 to convert these values to hexadecimal, and transmit them as exclusive data.
For example, to set the tune (C-B) of the Part1 Arabian Scale, send the data as follows: F0 41104212401140 3A 6D 3E 34 0D 38 6B 3C 6F 4036 0F 50 F7

> 3: Organ
> 4: Guitar/Bass
> 5: Strings/Pad
> 6: Voice/Winds

## - MIDI Out Mode

You can select the MIDI data that will be output when you make tone changes on the FP-3's panel.
Additionally, performance data that has been recorded on the FP-3 can be sent out from the MIDI Out connector.
Please refer to the Owner's Manual for information on setting the MIDI Out Mode.

## OMIDI Out Mode 1:

The MIDI messages shown below are output when you perform a tone change on the FP-3.
This setting is suitable when connecting a sequencer, and recording/playing performances

- Program Change/Bank Select
- Reverb Macro/Reverb Send Level
- Chorus Send Level
- System EFX Type/Part EFX Type/Part EFX Macro/Part EFX Depth

## OMIDI Out Mode 2:

The MIDI messages listed above will NOT be output when you perform a tone change on the FP-3.
This mode is suitable when you don't want to change the tones or effects of a connected sound module when the FP-3 is operated.

## OMIDI Out Mode 3:

When the FP-3 contains recorded performance data, the performance data is transmitted from the MIDI Out connector when the [Play] button on the FP-3 is pressed.
You can transmit the data recorded on the FP-3 to external devices, and play an external sound module.
In this mode, the same MIDI messages as those output in MIDI Out Mode 1 will be output when you perform a tone change on the FP-3.
