

WaveLab 7.1.1, WaveLab Elements 7.1.1, WaveLab LE 7.1.1 – fixed issues

- Please note that the following issues have been fixed in the 7.1.1 update.

| Issue | Version | Area |
|--|-------------------------------|---------------|
| Opening MP3 files Opening MP3 files containing non-ascii characters, such as Japanese, was not possible. | WaveLab LE only, Windows only | Audio Editing |
| Dirac 3.2.5 update The "quality mode" labelled as "Quick" is now available again. | WaveLab 7 & Elements 7 only | Audio Editing |
| Loop Tweaker bug in Wavelab 7 Switching from audio file to another with having the dialog open, pressing the small "Memory" buttons might have caused a crash (when the number of loops was different in the audio files). | WaveLab 7 & Elements 7 only | Audio Editing |
| Pitch quantizing When used with files other than mono 44.1 / 48kHz, a crash was happening. | WaveLab 7 only | Audio Editing |
| Silence dialog The option "Background noise" could not be enabled. | WaveLab 7 only | Audio Editing |
| Opening WMA files Opening WMA files containing non-ascii characters, such as Japanese, was not possible. | Windows only | Audio Editing |
| "What's this" in Montage Tool Windows Clicking on "What's this" inside the Montage Tool windows did not display the help dialog. | All Versions | Audio Montage |
| Plug-ins with a generic UI in Audio Montage Loading a preset did not update the controls (but the processor was updated). Editing the plug-in, closing it, and reopening, did not update the controls. | All Versions | Audio Montage |
| Crossfade when resizing multiple clips When mode "Allow multiple automatic crossfades" is activated: when resizing multiple selected clips layed out on different tracks (dragging one clip edge with the ALT key), only one auto-crossfade was performed. | All Versions | Audio Montage |
| Audio Montage templates An Audio Montage template could only be saved if the associated folder inside the WaveLab preferences already existed. | WaveLab 7 & Elements 7 only | Audio Montage |
| Hang on opening Postfilter plug-in During playback, the Steinberg Postfilter plug-in is inserted in the montage. | WaveLab 7 & Elements 7 only | Audio Montage |
| CD Report The font size was not taken into account for the custom header text. | WaveLab 7 only | Audio Montage |

| Issue | Version | Area |
|--|-----------------------------|------------------|
| <p>Locked clips</p> <p>It is now possible to make an audio range selection over a clip even if it is locked. The message that appears when clicking on a locked clip can be hidden ("Don't show again" option).</p> | WaveLab 7 only | Audio Montage |
| <p>Navigator tool window</p> <p>Double-clicking inside that window, would undock it.</p> | WaveLab 7 only | Audio Montage |
| <p>Time ruler offset</p> <p>When an offset was set for the time ruler: Clip list: the start and end times were displayed incorrectly (the offset was added twice). Marker list (montage and audio file): Editing a marker position did not produce the expected result.</p> | WaveLab 7 only | Audio Montage |
| <p>Batch processing and VST-3 plug-ins with a generic UI</p> <p>Changes of plug-in parameters were not saved correctly.</p> | WaveLab 7 only | Batch processing |
| <p>Batch processor error recovery</p> <p>When a batch process was not able to write a file (eg. "output file already opened in WaveLab") and a multi-pass plug-in was used (eg. Normalizer), it was not possible to close the batch window after the error was encountered.</p> | WaveLab 7 only | Batch processing |
| <p>Cloning a batch</p> <p>When cloning a batch file, the output path setting was not copied.</p> | WaveLab 7 only | Batch processing |
| <p>Meta-Pass plug-ins and number of cores</p> <p>When using the Meta-normalizer or Meta-leveller inside a batch processor, while the number of cores was set to 2 or more in the batch options, some files were not processed.</p> | WaveLab 7 only | Batch processing |
| <p>Plug-in error while batch processing</p> <p>If a plug-in error has happened during batch process, WaveLab could become less reliable later because of memory problems.</p> | WaveLab 7 only | Batch processing |
| <p>VST-3 plug-in presets in Batch Processor</p> <p>Selecting a preset for a VST-3 plug-in within the Batch Processor workspace might have resulted in a crash.</p> | WaveLab 7 only | Batch processing |
| <p>Save Master Section preset</p> <p>When loading a Master Section preset from a (custom) sub-folder, it was only possible to save that preset with the "save as" dialog in the root folder.</p> | WaveLab 7 & Elements 7 only | Master Section |
| <p>Meter orientation and "Hide frame" setting</p> <p>The Meter orientation and "Hide frame" settings were not saved and restored in Workspace layouts.</p> | WaveLab 7 only | Meters |
| <p>Master Section on/off while playing back</p> <p>During playback, toggling the Master Section on/off button (bottom right of the Master Section), might have caused the play position to jump backwards.</p> | All Versions | Playback |
| <p>Closing a Montage with plug-ins</p> <p>When closing a Montage with some plug-ins opened, a crash could happen.</p> | All Versions | Plug-in |

| Issue | Version | Area |
|---|------------------------------|-----------------------|
| <p>Plug-in value editing</p> <p>It was not possible to edit the numeric values of some plug-ins (e.g. Sonnox) properly by using the keyboard. In general, value editing with the keyboard, has been improved.</p> <p>Please note: pressing the Space bar or the Enter key triggers playback in WaveLab, if these key commands are not captured by the focused plug-in. Usually, by clicking on the plug-in's window, the keyboard shortcuts are automatically assigned to them. Selecting something different within WaveLab focusses the keyboard commands on WaveLab (host) again. But from 7.1.1, if you can also press the Escape Key for having the same effect.</p> | All Versions | Plug-in |
| <p>VST-2 plug-in resizing</p> <p>VST-2 plug-ins did not resize them properly when opened from the batch processor.</p> | All Versions | Plug-in |
| <p>VST-2 preset names</p> <p>Loading a VST-2 preset file did not update the preset box title with the preset name.</p> | All Versions | Plug-in |
| <p>VST-3 plug-in resizing</p> <p>For certain VST-3 plug-ins, the plug-in did not resize itself properly.</p> | All Versions | Plug-in |
| <p>Sonnox DeBuzzer hum frequency parameter</p> <p>The hum frequency parameter did not consider the actual samplerate of the audio signal. It was set to 44.1kHz permanently.</p> | WaveLab 7 & Elements 7 only | Plug-in |
| <p>External Gear plug-in</p> <p>Rendering could produce audio gaps.</p> | WaveLab 7 only | Plug-in |
| <p>Dot at the end of a plug-in manufacturers name</p> <p>If a plug-in vendors name ends with a dot (e.g. "iZotope, Inc."), it was not possible to save presets. Now WaveLab removes the dot.</p> | Windows only | Plug-in |
| <p>Mouse Wheel support</p> <p>Mouse wheel editing is now supported by more VST-3 plug-ins than before.</p> | Windows only | Plug-in |
| <p>Plug-in activation</p> <p>When using enhanced plug-in title bars (default), the plug-in was not activated by clicking inside the graphical user interface. The only way to activate the plug-in was to click on the title bar.</p> | Windows only | Plug-in |
| <p>Opening the Record dialog</p> <p>Sometimes a crash occurred when opening the record dialog before playback was started.</p> | All Versions | Recording |
| <p>File Format Dialog > Change sample rate or sub-format</p> <p>When trying to specify a sample rate or a new WAV sub-format which is not PCM, a message box is displayed. After selecting the "Don't show again" option it was not possible to change the settings again until WaveLab was restarted.</p> | All Versions | Rendering & importing |
| <p>Rendering regions</p> <p>By choosing the "regions" mode in the rendering window, the file name in "create named files" normally switched to "regions names are used". But after the first rendering, this was not possible anymore, unless the option "Create names file(s)" was toggled twice.</p> | WaveLab 7 only | Rendering & importing |
| <p>Switcher: Auto Hiding</p> <p>This option was only working when the active workspace was an Audio File Workspace.</p> | WaveLab 7 only, Windows only | Switcher |

| Issue | Version | Area |
|---|-----------------------------|----------------|
| <p>Compatibility issue with iLok licensing dialog</p> <p>Certain third-party plug-ins using the iLok protection have shown a reminder license dialog, which has blocked WaveLab (when opening the plug-in from within WaveLab). Limitation: the license dialog will still be blocked at program startup. It is recommended to register the plug-in before launching WaveLab.</p> | All Versions | User Interface |
| <p>Large popup menus when 2 screens of different sizes are used</p> <p>When displaying a large popup menu on the smallest screen, only part of it was selectable (eg. Master Section plug-in menu).</p> | All Versions | User Interface |
| <p>Pitch of A3 preference</p> <p>This value (Options / Global Preferences / Formats) did not work properly.</p> | WaveLab 7 & Elements 7 only | User Interface |
| <p>Wacom Tablet issue</p> <p>Under Windows, when using a Wacom Tablet with a pen that is set to "Mouse mode", mouse clicks were lost very often.</p> | Windows only | User Interface |
